Group <u>22</u> Students <u>84000</u> <u>84106</u> Grade ____

Student should fill the Concluded/Correct percentage

Minimum functionality enough to pass	10 Values	Concluded/Correct (95 %)
Implementation of a clipboard that accepts multiple simultaneous local connections: clipboard_copy, clipboard_paste		
Synchronization	+1 value	Concluded/Correct (100%)
Definition of the various critical regions and implementation of correct synchronization		
Efficient synchronization	+1 value	Concluded/Correct (9 0 %)
Implementation of synchronization on the critical regions guaranteeing that they are the shortest possible		
Clipboard_wait	+1 value	Concluded/Correct (100_%)
Correct implementation of the clipboard_wait function		
Connection to another clipboard	+1 value	Concluded/Correct (100 %)
Implementation of the -c option, basic replication of the data among the various clipboards Detection of disconnect e correct execution aftwards		and a company of the
Correct replication among clipboards	+1 value	Concluded/Correct (100 %)
Implementation of a correct synchronization algorithm that guarantees the consistency of the data when two simultaneous copies occur in different clipboards		
Errors treatment	+1 value	Concluded/Correct (85 %)
Verification, correction and report of communication errors Verification, correction and report of execution errors on the clipboards		
Correct Resources management	+1 value	Concluded/Correct (30 %)
Correct management (destruction) of threads, sockets, memory		
Code structure	+1 value	Concluded/Correct (95%)
Report	+1 value	Concluded/Correct (%)
Discussion	+1 value	Concluded/Correct (%)
Incorrect implementation of the API	-10 values	Concluded/Correct (100 %)
